Trout & Salmon: Ecology, Conservation and Rehabilitation ("Fishing News" Books) Trevor Crisp

This important book contains a great wealth of practical information on trout and salmon, species of fish that are of huge scientific and commercial interest.

The introductory chapters of Trout and Salmon cover the biology and environmental variables of importance when considering these species. Further chapters encompass current information on the ecology of salmon and trout, with particular emphasis on the definition and quantification, where possible, of their environmental requirements and limitations. Comprehensive coverage of the impacts of human activities on trout and salmon is included, together with important aspects of relevance when considering issues of species conservation and habitat restoration.

The book concentrates on the two species of the genus *Salmo* with many references and comparisons with the genus *Oncorhynchus*. Conclusions drawn within the book apply to both genera and as such the book will have relevance for both Europe and North America as well as other areas where these genera occur.

Trevor Crisp has written a book that will be of great interest and use to fish biologists and fisheries scientists, to aquatic biologists, conservationists, ecologists and environmental scientists. The book will be particularly valuable for those working in government environment agencies and fish and wildlife departments and to all those involved in the management of these important species, their fisheries and habitats.
