Biometrika: Vol. 62, No. 1 April 1975

Biometrika is primarily a journal of statistics in which emphasis is placed on papers containing original theoretical contributions of direct or potential value in applications. From time to time, papers in bordering fields are also published. Biometrika is produced by Oxford University Press on behalf of the Biometrika Trust . . Biometrika was established in 1901 by Francis Galton, Karl Pearson and W. F. R. Weldon to promote the study of biometrics, the statistical analysis of hereditary phenomena. Since the 1930s it has been a journal for statistical theory and methodology, statistics & probability, mathematical & computational biology, and theoretical statistics. Biometrika begins with a clear statement of purpose: It is intended that Biometrika shall serve as a means not only of collecting or publishing under one title biological data of a kind not systematically collected or published elsewhere in any other periodical, but also of spreading a knowledge of such statistical theory as may be requisite for their scientific treatment. Its contents were to include: (a) memoirs on variation, inheritance, and selection in animals and plants, based upon the examination of statistically large numbers of specimens ...; (b) those developments of statistical theory which are applicable to biological problems; (c) numerical tables and graphical solutions tending to reduce the labour of statistical arithmetic; (d) abstracts of memoirs, dealing with these subjects, which are published elsewhere; and (e) notes on current biometric work and unsolved problems.
