Climate Engineering: Technical Status, Future Directions, and Potential Responses

U.S. Government Accountability Office, Center for Science, Technology, and Engineering

Climate Engineering: Technical Status, Future Directions, and Potential Responses U.S. Government Accountability Office, Center for Science, Technology, and Engineering
GAO-11-71. Reports of rising global temperatures have raised questions about responses to climate change, including efforts to (1) reduce carbon dioxide (CO₂) emissions, (2) adapt to climate change, and (3) design and develop climate engineering technologies for deliberate, large-scale intervention in Earth's climate. Reporting earlier that the nation lacks a coordinated climate-change strategy that includes climate engineering, GAO now assesses climate engineering technologies, focusing on their technical status, future directions for research on them, and potential responses. To perform this technology assessment, GAO reviewed the peer-reviewed scientific literature and government reports, consulted experts with a wide variety of backgrounds and viewpoints, and surveyed 1,006 adults across the United States. Experts convened with the assistance of the National Academy of Sciences advised GAO, and several reviewed a draft of this report. GAO incorporated their technical and other comments in the final report as appropriate. Climate engineering technologies do not now offer a viable response to global climate change. Experts advocating research to develop and evaluate the technologies believe that research on these technologies is urgently needed or would provide an insurance policy against worst case climate scenarios--but caution that the misuse of research could bring new risks. Government reports and the literature suggest that research progress will require not only technology studies but also efforts to improve climate models and data. The technologies being proposed have been categorized as carbon dioxide removal (CDR) and solar radiation management (SRM). CDR would reduce the atmospheric concentration of CO₂, allowing more heat to escape and thus cooling the Earth. For example, proposed CDR technologies include enhancing the uptake of CO₂ in oceans and forests and capturing CO₂ from air chemically for storage underground. SRM technologies would place reflective material in space or in Earth's atmosphere to scatter or reflect sunlight (for example, by injecting sulfate aerosols into the stratosphere to scatter incoming solar radiation or brightening clouds) or would increase the planet's reflectivity (for example, by painting roofs and pavements in light colors). GAO found these technologies currently immature, many with potentially negative consequences. Some studies say, for example, that stratospheric aerosols might greatly reduce summer precipitation in places such as India and northern China. Many experts advocated research because of its potential benefits but also recognized its risks. For example, a country might unilaterally deploy a technology with a transboundary effect. Research advocates emphasized the need for risk management, envisioning a federal research effort that would (1) focus internationally on transparency and cooperation, given transboundary effects; (2) enable the public and national leaders to consider issues before they become crises; and (3) anticipate opportunities and risks. A small number of those we consulted opposed research; they anticipated major technology risks or limited future climate change. Based on GAO's survey, a majority of U.S. adults are not familiar with climate engineering. When given information on the technologies, they tend to be open to research but concerned about safety.~

From reader reviews:

Tanisha Goss:

What do you concerning book? It is not important to you? Or just adding material if you want something to explain what the one you have problem? How about your spare time? Or are you busy individual? If you don't have spare time to accomplish others business, it is make you feel bored faster. And you have time? What did you do? Every person has many questions above. The doctor has to answer that question due to the fact just their can do that. It said that about book. Book is familiar in each person. Yes, it is correct. Because start from on kindergarten until university need that Climate Engineering: Technical Status, Future Directions, and Potential Responses to read.

William Todaro:

As people who live in the particular modest era should be upgrade about what going on or info even knowledge to make these people keep up with the era that is certainly always change and make progress. Some of you maybe will update themselves by looking at books. It is a good choice in your case but the problems coming to you actually is you don't know which one you should start with. This Climate Engineering: Technical Status, Future Directions, and Potential Responses is our recommendation to help you keep up with the world. Why, since this book serves what you want and need in this era.

David McGowan:

Do you have something that that suits you such as book? The reserve lovers usually prefer to choose book like comic, short story and the biggest an example may be novel. Now, why not attempting Climate Engineering: Technical Status, Future Directions, and Potential Responses that give your entertainment preference will be satisfied simply by reading this book. Reading practice all over the world can be said as the means for people to know world far better then how they react to the world. It can't be said constantly that reading addiction only for the geeky man or woman but for all of you who wants to always be success person. So , for all of you who want to start reading as your good habit, you are able to pick Climate Engineering: Technical Status, Future Directions, and Potential Responses become your personal starter.

Lola Behrendt:

Are you kind of active person, only have 10 or maybe 15 minute in your moment to upgrading your mind talent or thinking skill actually analytical thinking? Then you have problem with the book when compared with can satisfy your small amount of time to read it because all this time you only find publication that need more time to be read. Climate Engineering: Technical Status, Future Directions, and Potential Responses can be your answer since it can be read by an individual who have those short spare time problems.
