Biodegradable Metals: From Concept to Applications (SpringerBriefs in Materials)

Hendra Hermawan

Biodegradable Metals: From Concept to Applications (SpringerBriefs in Materials) Hendra Hermawan

This book in the emerging research field of biomaterials covers biodegradable metals for biomedical applications. The book contains two main parts where each of them consists of three chapters. The first part introduces the readers to the field of metallic biomaterials, exposes the state of the art of biodegradable metals, and reveals its application for cardiovascular implants. Some fundamental aspects to give basic understanding on metals for further review on the degradable ones is covered in chapter one. The second chapter introduces the concept of biodegradable metals, it's state of the art and discusses a shifted paradigm from inert to bioactive, from corrosion resistant to corrodible metals. The third chapter focuses on the challenges and opportunities of using biodegradable metals for cardiovascular applications. The second part exposes an example of biodegradable metals from its concept to applications where a complete study on metallic biodegradable stent is detailed from materials design, development, testing till the implant fabrication. The forth chapter reveals new alloys development devoted for metallic biodegradable stent based on required criteria derived from clinical needs and current nondegradable stents properties. Degradation of the alloys in simulated arterial conditions and its effect to cells are exposed in chapter five. The both chapters are concluded with a benchmarking of some more recent researches on materials development and testing for biodegradable stents. Chapter six reveals the tranformation process of the materials into stent prototypes where a standard process for making 316L stainless steel stents was followed. The book is completed by a perspective on the use of biodegradable metals for biomedical applications in the era of tissue engineering.

From reader reviews:

Adrian Kester:

Have you spare time to get a day? What do you do when you have considerably more or little spare time? Yep, you can choose the suitable activity to get spend your time. Any person spent their very own spare time to take a move, shopping, or went to the Mall. How about open or maybe read a book allowed Biodegradable Metals: From Concept to Applications (SpringerBriefs in Materials)? Maybe it is for being best activity for you. You know beside you can spend your time using your favorite's book, you can better than before. Do you agree with its opinion or you have other opinion?

Sally McGarvey:

Here thing why that Biodegradable Metals: From Concept to Applications (SpringerBriefs in Materials) are different and reputable to be yours. First of all looking at a book is good nevertheless it depends in the content of computer which is the content is as delightful as food or not. Biodegradable Metals: From Concept to Applications (SpringerBriefs in Materials) giving you information deeper including different ways, you can find any guide out there but there is no e-book that similar with Biodegradable Metals: From Concept to Applications (SpringerBriefs in Materials). It gives you thrill reading through journey, its open up your personal eyes about the thing this happened in the world which is possibly can be happened around you. You can actually bring everywhere like in playground, café, or even in your approach home by train. In case you are having difficulties in bringing the printed book maybe the form of Biodegradable Metals: From Concept to Applications (SpringerBriefs in Materials) in e-book can be your substitute.

Jennifer Barton:

Nowadays reading books become more than want or need but also turn into a life style. This reading behavior give you lot of advantages. The benefits you got of course the knowledge the actual information inside the book this improve your knowledge and information. The information you get based on what kind of publication you read, if you want drive more knowledge just go with education and learning books but if you want sense happy read one with theme for entertaining for example comic or novel. The Biodegradable Metals: From Concept to Applications (SpringerBriefs in Materials) is kind of reserve which is giving the reader capricious experience.

James Jernigan:

Your reading 6th sense will not betray you, why because this Biodegradable Metals: From Concept to Applications (SpringerBriefs in Materials) book written by well-known writer whose to say well how to make book that could be understand by anyone who else read the book. Written in good manner for you, still dripping wet every ideas and creating skill only for eliminate your own hunger then you still question Biodegradable Metals: From Concept to Applications (SpringerBriefs in Materials) as good book not simply by the cover but also with the content. This is one e-book that can break don't ascertain book by its protect,

so do you still needing one more sixth sense to pick this particular!? Oh come on your reading sixth sense already alerted you so why you have to listening to an additional sixth sense.
